

# 10 Repo Structure

Our projects are hosted on the [HSE GitLab Server](#).

This page defines the default repository structure used by these projects.

Repository names are always **lower-case!**

```
/Documentation
  /DocGen                // RAT-generated documentation
  requirements.xlsx      // requirements document
/PPL                    // PPLs the project code depends on
/Resources              // Various stuff, like icons
/<%project_directory%> // Contains the actual source codes of
the project
/Tests                // All sorts of tests for the repo
  /Unit Tests        // Unit Tests for the source code
/Tools                // Project-related helpers like
converters etc
  /PPL                // Tools related to using and building
PPLs
  /VIP                // Tools related to building VI packages
.gitignore            // ignore definitions for git
.gitlab-ci.yml        // generic config for gitlab CI
CONTRIBUTING.md     // details about collaborating
rat.yml              // specific config for gitlab CI
rat-analyzr.cfg      // config file for VI Analyzer (LV
version specific!)
LICENSE               // legal details
README.md            // description of project
<%project_name%>.vipc // VIPM configuration file
<%project_name%>.vipb // VIP build configuration file (if
applicable)
```

For details on the *project directory* structure, see the [Project Structure](#) wiki page.

More information on the files displayed here are available:

- [.gitignore](#)
- [.gitlab-ci.yml and rat.yml](#)
- [README.md](#)
- [LICENSE](#)
- [CONTRIBUTING.md](#)

For a more generic take on how we structure our software projects, see the **Structure** page of our [WoW description](#).
