

01 Helper VIs

These VIs are not part of the DQMH default features and have to be implemented manually in every HSE DQMH module.

Load Module.vi

Combines Start Module.vi and Synchronize Module Events.vi. Wrapping these allows to programmatically start any module (by use of call by reference) as the module-specific connector panes are hidden away.

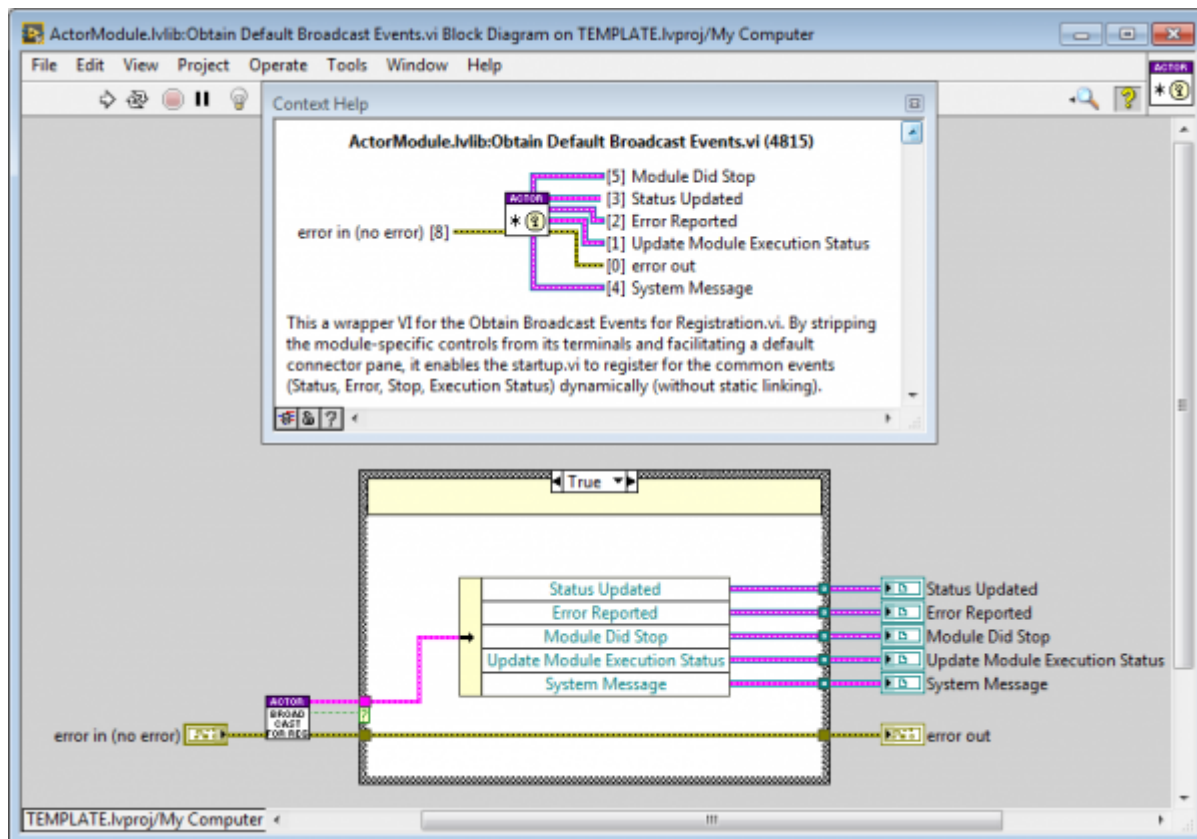

Obtain Default Broadcast Events.vi

Encapsulates the module-specific Obtain Broadcast Events for Registration.vi and only returns the *default* broadcast event references that any HSE DQMH module features. Wrapping the VI allows to programmatically obtain the default event references as the module-specific connector panes are hidden away.

Event references returned are:

- Status updated
- Error reported
- Module Did Stop
- Update Module Execution Status
- System Message (HSE-specific event)
